

## Dress Me: The Personalized Clothing Assistant

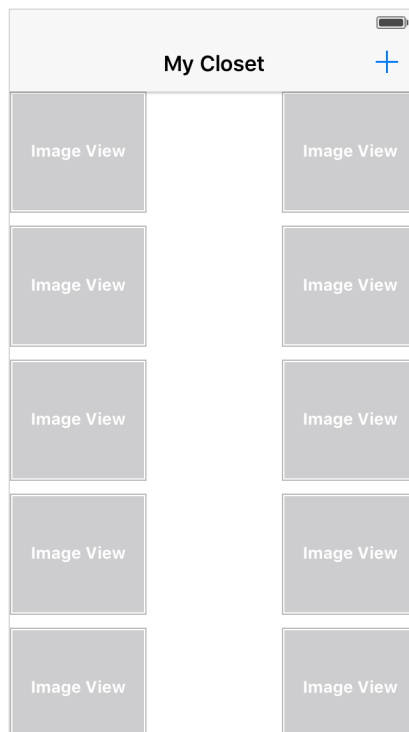

### Description:

The Goal for this app is to have a virtual “closet” that organizes user uploads of pictures of their clothes into a collection view featuring a thumbnail image of the uploaded picture. During the upload process, users can save additional pieces of information about the clothing item for use during searches (e.g. “Color: Red, so when searching for “red” in the closet, all items tagged with it show up) Time permitting, I’d like to create another view where users can create outfit grids from clothes they pick in the closet and save them to “Favorite Outfits”.

### Testing:

Standard Swift unit testing to go through some use cases with adding images, searching for a tag, etc.

### Program Flow / Visual Template:

A mockup of the 'Add Clothing Item' app form. The title bar at the top has three buttons: 'Cancel' (blue), 'Add Clothing Item' (black), and 'Save' (blue). The main content area contains a large gray rectangular placeholder labeled 'Image View'. Below this are three input fields: 'Name:', 'Type:', and 'Color:', each followed by a white text input box with a gray border.
